

SAP BI / BW Lead Analyst- Permanent Position - Tampa, FL

US Citizens or Permanent Residents Only

Summary / Purpose

We are looking for a Business Intelligence SAP Solution Lead who is responsible for implementing enterprise data warehousing, based upon an SAP BW architecture, including responsibility for evolution and production support of the data warehouse architecture and BI environment. This role will serve as a strategic architect and liaison providing assistance to various members of the teams by understanding the business processes and requirements of the users at a depth sufficient to design and implement the appropriate BI architecture and solution.

SPECIFIC SKILLS AND KNOWLEDGE include the following:

- Two plus years acting as a technical project lead.
- Four (4) to six (6) years experience with SAP BI/BW (3.5 and or 7.0) with hands on experience with Administrator Workbench, InfoProviders,
- Three (3) to five (5) years experience in Data Modeling, Data warehousing and enterprise reporting tools.
- Three plus years using ETL tools and related methodologies and approaches along with SAP Netweaver components experience.
- Three plus years developing Infocubes and queries in at least one of the modules: SD, IC, FI, PP and PU.
- Must have two (2) plus years programming in ABAP.

Essential Duties and Responsibilities

- Lead functional analysts and project teams to develop new data warehouse functionality and architecture from business specifications by modeling, designing, developing, testing and implementing the appropriate back-end structures (including Infosources, ODSs, and Info Cubes) needed to meet business requirements.
- Initiate proactive investigation, review, assessment, design and implementation of methods to improve existing processes, performance, security and data access. Assess existing and available data warehousing technologies and methods to ensure our BI architecture meets the needs of the business unit and enterprise and allows for business growth. Provide recommendations on evolution of the architecture.
- Work collaboratively with the business community and ITS colleagues to establish a secure, effective, and efficient data warehouse architecture supporting multiple business subject areas
- Prepare and review functional specifications and detailed technical designs for software solutions based on help desk tickets, user enhancement requests and functional requirements.

Job Requirements

Degree in Computer Science OR equivalent. 4+ years experience in enterprise development. Must have thorough knowledge of SQL and basic knowledge of at least 2 other programming languages.
